COSMETICS PACKAGING

We also support your new product concepts. Please contact our "Cosmetics Packaging" unit directly: info@gabriel-chemie.com

COSMETICS PACKAGING

Beauty, elegance, differentiation and sustainability – top quality packaging design and interactive colours are central to the cosmetics industry. A creative choice of materials and attractive surface designs massively enhance the successful market launch of a product.

COMPETENCE IS OUR STRENGTH

At the GABRIEL-CHEMIE Group we offer support services for individual and customer-orientated developments in any polymer for any type of packaging to combine contemporary design with innovation and function. Our speciality is colour - from transparent to opaque, subtle to extravagant and fashionable to purely functional. Combinations of additives and colours or purely additive-packs offer additional opportunities for product design and optimise the characteristics of your packaging.

APPLICATIONS

COSMETIC TUBES

Special effect pigments enhance the exclusivity of a tube. We work with you to turn design and marketing proposals into successful actual products. Our outstanding team of colourists enables the manufacture of tubes with selected pigment preparations.

CREAM CONTAINERS AND DECORATIVE COSMETIC PACKAGING

The right colour is of extreme importance at the point of sale and is one of the factors which decide the success of a brand. Especially original surfaces turn a package into an eye-catcher. The polymer-specific carrier systems we use guarantee optimum compatibility for your packaging product.

COSMETIC BOTTLES AND DISPENSERS

We source innovative raw materials of high quality for attractive designs that are easy to use. The consumer has new demands for cosmetic bottles and dispensing systems. We look forward to working with you to develop tailored pigment preparations to ensure the compatibility and endurance of your packaging product.

COSMETIC CLOSURES

Here again the consumer is looking for user-friendly and functional concepts. The look, organoleptic properties and ease of manufacture are the determinants of market success for these demanding mass-produced articles. Consumers are looking for easy to use, functional concepts. Our formulations ensure the optimum functionality of your closures.
